What is the Consumer Price Index?

The Consumer Price Index (CPI) is a statistical indicator of changes in the general level of prices of consumer goods and services purchased by private households. The CPI measures price movements of a fixed quality and quantity of goods and services. The mix of these consumer goods and services comprising the CPI are referred to as a “shopping basket.” In constructing this “shopping basket”, the selected goods and services are organised first by commodity type. They are then divided into sections, then sub-groups and then assigned to a major expenditure category. The Antigua and Barbuda CPI has 26 sections, 30 sub-groups and 12 major categories.

What is the Base Period?

The base period (base year) is the time period that is used as a reference point for measuring the price change of goods and services. The base period for the Antigua and Barbuda CPI is January 2019.

The base period index is represented as 100.0. (Usually presented as 2019 = 100). So for instance, if the April 2020 CPI for chicken legs is 167.1, then it means that the price for chicken legs has gone up by 67.1% since 2019. Similarly, if the January 2020 CPI for bread is 93.1, then the price of bread has dropped by 6.9% compared to its price in 2019.

What is Inflation?

Inflation is the process of rising prices, resulting in diminishing purchasing power of a given amount of money. There are three expressions of price changes:

- year-on-year (*the inflation rate*)
- month-to-month
- annual average (or annualised average)

The annual average CPI is the arithmetic mean of the CPIs of the 12 months.

What are Weights?

Weights are "expenditure shares" that is the proportion of total spending on various consumer goods and services, for example, 20% on rent, 25% food, 15% transport, 10% on utilities and so on. the CPI weights are a expression of household's spending on consumer goods and services.

The weights were drawn from a survey of a sample of households in each month of 2006 (the weight base period). Each household in the sample kept a record of their expenditure for one month. Once completed, the expenditures were added to determine expenditure shares per 1000; these are the weights.

The current weights indicate that, households would spend the most on *Accommodation* (218.3 out of 1000) followed by *Food* (214.2) and *Transportation and Communication* (153.5). Households spend the least on *Alcoholic Drink and Tobacco* (1.6).

The compilation of the CPI and the calculation of the inflation rate involve the processing of hundreds of price quotations. Jun 2025 compared to Jun 2024
May 2025 compared to May 2024
Jun 2025 compared to May 2025

In Jun 2025 compared to Jun 2024, 5 of the 12 main expenditure categories recorded price decreases, while 7 recorded price increases. 9 of the 23 sub-group levels also recorded price increases for some of the items that fall in that level. These collective increases and decreases would account for the magnitude and direction of the current inflation rate. 0 of the 12 main expenditure categories recorded no price changes.
